Career Objective

To build a long term career in technology driven and business oriented roles where I can apply my technical, analytical and problem solving skills to understand business operations, improve processes and support informed decision making while developing broader business and leadership capabilities.

Professional Summary

CSE graduate with 1+ years of backend engineering experience transitioning toward data analytics, business intelligence and technology driven business problem solving. Currently pursuing a Post Graduate Diploma in Data Science with Machine Learning and Artificial Intelligence. My technical background helps me understand business systems and data, while my analytical skills help me analyze business problems, identify patterns and support informed decisions.

Core Skills

- **Data Analytics:** Python, SQL, Pandas, Numpy, Statistics, Data Analysis, Power BI, Matplotlib, Excel
- **Machine Learning**: Machine Learning, Artificial Intelligence, Scikit-learn
- **Engineering Background (Production Experience):** TypeScript, JavaScript, Node.js, NestJS, PostgreSQL, REST APIs, Docker
- **Professional:** Problem Solving, Analytical Thinking, Communication, Collaboration, Adaptability, Business Oriented Thinking, Continuous Learning

Data Analytics Project

Bangladesh Healthcare Appointment Analytics

Stack: Python, Pandas, Matplotlib, Excel, Scikit-learn, Machine Learning, Statistics, Data Analysis

Github Repository | Detailed Analysis Report | Predictive ML Analysis (No Show) | Predictive ML Analysis (Waiting Days)

- Analyzed healthcare appointment data to understand operational patterns around patient no-shows, appointment demand, and waiting times across divisions, specialties, and patient groups.
- Identified key operational patterns and translated them into business insights for appointment scheduling, service planning, and areas requiring further investigation.
- Extended the analysis with predictive modeling to evaluate whether available appointment data could support no-show and waiting-time prediction.
- Evaluated model performance and limitations to determine whether the available data contained sufficient predictive information for practical use.

E-Commerce Sales & Customer Analytics

Stack: Excel, Python, Pandas

Github Repository | Detailed Analysis Report

- Analyzed 1,956 sales transactions from 287 customers across all 8 divisions to understand why revenue declined in 2024 and where the decline was concentrated.
- Traced the revenue decline to Laptops and Monitors, with the largest drops concentrated in Chattogram and Rangpur, helping identify where further investigation was needed.
- Built two interactive Excel dashboards to analyze sales performance, product and regional trends, and customer behavior.

- Applied RFM analysis to segment customers by recency, purchase frequency and spending, identifying vulnerable customer groups and potential retention opportunities.
- Used Python to identify data consistency and accuracy issues.

Experience

Junior Software Engineer, TulipTech Ltd

Dhaka, Bangladesh | Nov 2025 – May 2026

- Worked on backend systems for internal products, contributing to APIs, databases, real time data handling, and shared data validation processes. This experience strengthened my understanding of how business applications generate, organize and process operational data.

Backend Developer, Chetona

Dhaka, Bangladesh | Dec 2024 – Oct 2025

- Developed and maintained backend services supporting different user roles and business workflows. Working with APIs, databases, and backend architecture gave me practical exposure to how software systems support day to day operations and how structured data flows through those systems.

Education

Post Graduate Diploma in **Data Science** with **Machine Learning & Artificial Intelligence —** PeopleNTech Institute of IT, 2026–2027

B.Sc. in **Computer Science & Engineering —** Military Institute of Science and Technology (MIST), 2020–2024

HSC — Dhaka Residential Model College, 2017–2019

SSC — Dhaka Residential Model College, 2015–2017

Certificates

Unleashing Cognitive Empowerment, Problem Solving & Decision Making

Passport to Earning Bangladesh | May 2026
