Summary

Backend Developer with more than one year of professional experience building scalable and secure systems using Node.js and NestJS. Strong in PostgreSQL database design and API architecture, with hands-on experience in monorepo structures, type-safe APIs (oRPC), and Supabase integrations. Familiar with React and Next.js, enabling efficient backend-frontend collaboration. Focused on clean, maintainable, and production-ready code.

Technical Skills (Hard Skills)

- **Languages:** TypeScript, JavaScript
- **Backend Frameworks:** Node.js, Express.js, NestJS, Bun.js
- **API & Architecture:** REST API Design, oRPC, tRPC, Monorepo (Turborepo), Zod Validation
- **Databases & ORMs:** PostgreSQL, TypeORM, Drizzle ORM
- **Realtime & Background Processing:** WebSockets, Supabase Realtime, Cron Jobs
- **Security & Authentication:** JWT, Supabase Auth, Role-Based Access Control (RBAC), Rate Limiting
- **Payments, Storage & Containerization:** Stripe (Connect), Supabase Storage, Docker
- **Familiarity:** React.js, Next.js, Redis Caching
- **Version Control & Tools:** Git, GitHub, Postman, Visual Studio Code

Soft Skills

- Problem Solving and Analytical Thinking
- Adaptability and Continuous Learning
- Team Collaboration and Communication
- Time Management and Task Prioritization

Experience

Backend Software Engineer, TulipTech Ltd

Dhaka, Bangladesh | Nov 2025 – May 2026

- Engineered production-grade NestJS backends within an existing monorepo architecture, delivering scalable REST APIs and type-safe contracts across multiple internal products.
- Contributed to a shared monorepo architecture using Turborepo, reducing backend code duplication and enabling reuse of validation, database, and API contract modules.
- Worked with oRPC and Scalar Reference UI for API documentation, implementing type-safe API contracts using Zod schemas.
- Used Supabase Auth, Realtime, and Storage to implement authentication, real-time features, and file storage across the backend.

Backend Developer, Chetona

Dhaka, Bangladesh | Jan 2025 – Oct 2025

- Implemented JWT-based authentication and authorization, securing APIs for multiple user roles.
- Designed and optimized REST APIs for production using Express.js.
- Improved system maintainability by restructuring backend using clean architecture principles and modular design.

Projects

TaskFlow — Project & Task Management

Stack: NestJS, Fastify, TypeScript, PostgreSQL, Drizzle ORM, Supabase (Auth, Storage), oRPC, Zod

[GitHub Repository](#) | [Open API](#)

- Designed and built a type-safe task management backend using oRPC procedures with explicit Zod input/output schemas.
- Used Scalar Reference UI via the oRPC OpenAPI plugin producing a modern interactive API docs experience auto generated from Zod schemas.
- Modeled a clean monorepo with Turborepo, separating validation, database, oRPC routers and Supabase clients into independent packages consumed by the NestJS app.
- Implemented full project and task lifecycle management, enabling efficient handling of user tasks and bulk operations.
- Integrated Supabase OAuth (Google) alongside email/password auth with a unified session model covering token refresh and logout.

Doctor Appointment Booking System

Stack: NestJS, Fastify, TypeScript, PostgreSQL, TypeORM, Supabase (Auth, Realtime, Storage), Stripe Connect, Nodemailer, Zod, Cron Jobs, REST API

[Github Repository](#) | [Open API](#)

- Architected a full-featured appointment booking API with NestJS and Fastify covering role based access for patients, doctors and admins.
- Built a real-time messaging and notification system using Supabase Realtime broadcast channels replacing WebSocket infrastructure without a dedicated server.
- Integrated Stripe Express Connect for multi vendor payment processing enabling per appointment checkout sessions with direct payouts to individual doctors.
- Applied email verification and password reset flows using Supabase Auth with session tracking.
- Applied a two-step signed URL file upload system via Supabase Storage.
- Automated appointment lifecycle transitions using NestJS cron jobs including inactive user cleanup and expired session removal.
- Implemented Zod validation across all DTOs in a shared validation package ensuring consistent input enforcement across the monorepo.

Education

B.Sc. in Computer Science & Engineering — Military Institute of Science and Technology (MIST),
2020–2024

HSC — Dhaka Residential Model College, 2017–2019

SSC — Dhaka Residential Model College, 2015–2017
